

OptConnect neo2

Everything you loved about OptConnect neo — times two.

Engineered and designed for high speed applications like:
Kiosks, Micro Markets, Digital Signage, and More!

DUAL CARRIER

Rather than having to choose between a single carrier, neo2, has dual carrier functionality. When you need the very best connectivity for your equipment, neo2 delivers twice the coverage with 2 carriers built right in.

BLAZING FAST

neo2 offers twice the speed compared to our original neo router. With 4G LTE Category 4 connectivity, your equipment will have the speed and efficiency to handle all of the demands you place on it.

2X CONNECTIVITY POWER

2X

In the same form factor as its predecessor, neo2 also includes a second ethernet port so you can connect two devices to a single router providing you greater flexibility and twice the connectivity power.

FULLY MANAGED SOLUTION

Every neo2 comes with the full bundle of OptConnect's fully managed solutions and services as well as a lifetime license to Summit, our robust, cloud-based monitoring platform. neo2 also includes Glimpse™ an on-board API that responds to requests from equipment's software and tells that equipment how neo2's cellular connection is performing.

With twice the carrier coverage, twice the speed, and twice the connectivity power, neo2 is the next evolution in OptConnect's fully managed wireless connectivity for the Internet of Things.
